

NISHANK GUPTA

Lucknow, India | gnishank8076@gmail.com | +91 8112579263
linkedin.com/in/nishankgupta-dev | github.com/Nishank018

Professional Summary

Full-stack developer currently working at an early-stage green energy B2B startup. Shipped a production-deployed web application with a custom scheduling algorithm supporting playlists of 100+ videos, and built a full-stack system monitoring dashboard covering 400+ networked machines during a DRDO internship. Holds a B.Tech in Computer Science & Engineering with strong fundamentals in DSA, Operating Systems, DBMS, and Computer Networks. Experienced in REST API development, LLM API integration, prompt engineering, and AI model evaluation. Open to remote full-stack, frontend, and AI-integrated engineering roles.

Technical Skills

Languages: C, C++, Python, JavaScript (ES6+), SQL (MySQL), PHP

Web & Backend: React.js, Node.js, Express.js, MongoDB, REST APIs, HTML5, CSS3, Responsive Design, Component-based Architecture

AI & Data: LLM API Integration (OpenAI, Gemini), Prompt Engineering, RLHF Workflows, Structured Output Parsing

CS Fundamentals: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, OOP

Tools & Platforms: Git, GitHub, Linux, VS Code, XAMPP, Apache, Postman, Vercel

Experience

Full Stack Developer

Jun 2025 – Present

GreenIoMart (Early-Stage Startup)

Remote

- Contributing to frontend architecture and component planning for a B2B green energy marketplace targeting the Indian renewable energy sector.
- Auditing the existing WordPress-based platform and preparing a technical migration roadmap toward a scalable, custom full-stack architecture using the MERN stack.
- Collaborating with the founding team on product scope, UI/UX decisions, and feature prioritization for upcoming development phases.

Technical Intern

Oct 2024 – Dec 2024

DRDO — Defence Research & Development Organisation

Hyderabad, India

- Built a full-stack system administration dashboard monitoring 400+ networked computers, centralizing hardware inventory, installed software tracking, and real-time process visibility for internal administrators.
- Architected 20+ normalized MySQL schemas and wrote optimized aggregate queries, enabling concurrent multi-log-entry processing while maintaining data integrity and reducing manual reporting overhead.

Projects

PlaylistPilot | *HTML5, CSS3, Vanilla JS, LocalStorage, Blob API* | [Live Demo](#)

- Problem:** No existing tool converts 100+ video YouTube playlists into personalized, day-by-day study schedules based on a learner's speed and availability.
- Engineered a greedy bin-packing scheduling algorithm distributing video lessons across consecutive days, factoring in playback speed (1x-2x), daily time budget, intensity pacing, and milestone goals — generating a full plan in 2-3 seconds via a streamlined 2-step user flow.
- Built a client-side Markdown export engine using the Blob API, compiling the complete schedule into a downloadable .md file with zero server dependency.
- Implemented multi-page LocalStorage persistence with graceful empty-state handling to maintain stability across out-of-order navigation.

System Admin & Monitoring Dashboard | *PHP, MySQL, JS, HTML5, CSS3* | [GitHub](#)

- Problem:** Network administrators lacked a centralized interface to query 400+ machines — hardware specs, processes, and software were tracked manually across disconnected systems.
- Delivered a responsive, full-stack internal tool enabling remote querying of any networked machine from a single interface, with integrated chart-based visualizations for system load and performance metrics.

AI Document Processing Tool | *Python, OpenAI / Gemini APIs, Prompt Engineering* | [GitHub](#)

- Problem:** Extracting structured data from unstructured documents manually is slow and error-prone at scale.
- Developed a Python application integrating OpenAI and Gemini APIs via role-formatted system prompts, with strict JSON parsing and fallback sanitization to reliably convert raw model outputs into validated, application-ready structured data.

Certifications

The Complete 2024 Web Development Bootcamp

Nov 2024

Udemy — Dr. Angela Yu | 61.5 hours | [Certificate](#)

- Covered full-stack web development: HTML5, CSS3, JavaScript, Node.js, Express.js, MongoDB, REST APIs, and React — end to end.

Education

B.Tech — Computer Science & Engineering

Aug 2021 – Sep 2025

Dr. Shakuntala Misra National Rehabilitation University

Lucknow, India

- Relevant Coursework: Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks, Compiler Design, System Architecture, Theory of Computation
